

Press Release

MP'175A

The new Manip' high-powered front loader

In pursuit of constant development, Manip' completes its range of MP'A loaders launched in 2005 by a new high-powered model the MP'175A which will be exhibited for the first time at the next SIMA show (from 4th to 8th of March 2007, stand 6 H 20).

Rigid and easily accessible hydraulic hosing integrated into the loader arm :

On the MP'175A the hydraulic hosing is integrated into the loader arm, offering maximum visibility. But as with public works machines and in order to render maintenance and after sales service easier, Manip' has used a maximum of rigid hosing integrated under the arm with easy access. Protected inside the arm by the stands, the hydraulic hosing cannot be seen.

Yet again an idea from Manip' !

MEGA-MATIC HD :

The Mega-Matic linkage system for high powered tractors

For the MP'175A Manip' has used the well-known Mega-Matic linkage system appreciated by users for over 10 years and have adapted it to the specific dimensions and requirements of high powered tractors.

Result : larger locking pins and an increased distance between the hitch pins for a maximum rigidity of the linkage.

.../...

.../...

On the other hand Manip' has kept the operating comfort with :

The automatic locking

The practical and effortless unlocking system by lever

Conical lock for backlash elimination

(Patented system)

Technical characteristics :

The new MP'175A loader has arrived to complete the top of the range MANIP' MP'A loaders. It's height and lift capacities make for the ideal loader for tractors of 150 to over 200 HP.

- Lift height : 4m50
- Lifting capacity at pivot point on the ground: 3475 kg
- Lifting capacity pallet stacker at maximum height : 2300 kg
